

TransPocket 150

Manual electrode (MMA) and TIG welding system

The TransPocket 150 performs at 150 Amps yet weighs only around 10 lbs. Its microprocessor control ensures outstanding welding properties and makes the TransPocket 150 an intelligent and long-lived welding system for both MMA and TIG applications.

PERFECT WELDING

The TP150 TIG MMA set –
the handy, lightweight
heavy-duty performer

LIGHTWEIGHT AND VERSATILE

- This sling-over-your-shoulder welding unit gives you "go-anywhere" mobility.
- Ideal for use in the field, on site assembly work as well as for maintenance jobs.

EXCELLENT WELDING PROPERTIES

- **Hot Start** briefly increases the amperage in the ignition phase, ensuring trouble free ignition of stick electrodes.
- The integral **Arc Force Control** automatically raises the welding amperage for a fraction of a second in the event of a short circuit.
- In addition, **Anti-Stick** switches the unit off immediately if a short circuit occurs. This prevents electrode burnout.

SUPERIOR PRODUCT QUALITY - LONG SERVICE LIFE

- The **sturdy, impact-proof** and **splash-proof housing** lets you work with the unit in tough environments.
- The TP150's **temperature-controlled fan** minimizes power consumption.
- The easy-to-operate **control panel** is clearly laid out, and **recessed** for protection.

AREAS OF UTILIZATION

- The TransPocket 150 is equally suitable for **both MMA stick electrode** and **TIG welding**.
- The system guarantees **constant power** all the time, even with **different mains supply voltages** (100 – 260 V).
- Because the unit is **generator-compatible**, it gives you great mobility.
